**POLYFLOR BECOMES THE FIRST FLOORING ORGANISATION TO ACHIEVE
'GREEN TAG' LCA RATE CERTIFICATION FROM ECOSPECIFIER**

Polyflor has become the first commercial flooring organisation in Australia and New Zealand to achieve Ecospecifier's 'Green Tag' LCARate certification as of December 2010. This achievement means Polyflor is the only vinyl flooring to achieve maximum rating points in the GBCA and NZGBC Green Star rating tools.

Polyflor's homogeneous resilient sheet and safety vinyl flooring ranges have just achieved Ecospecifier's Gold 'Green Tag' LCARate certification.

Importantly for the Flooring Calculator within the materials section of the Green Star rating tools, Polyflor vinyl flooring has also achieved a GreenRate level 'A', scoring maximum points when specified.

VOC Compliant

Polyflor's range of vinyl flooring options also complies with the GBCA's VOC standards. In short, this achieves the maximum one point available in the IEQ VOC flooring section of the Green Star rating tools.

The complete Kiesel range of self levelling screeds and antimicrobial adhesives also meets the VOC levels required by the GBCA. For Green Star professionals, this achieves an additional point within the IEQ VOC section of Green Star.

Polyflor's vinyl flooring ranges are 100% recyclable, providing the ideal fit for purpose and environmental flooring solution for a wide variety of healthcare, aged care, education, retail, office and commercial installations nationally and internationally. Polyflor really is 'flooring design for a better environment'. Call us to find out more and explore the endless design possibilities...

Polyflor complies with flooring related requirements of the VOC and Flooring Calculator Credits of Green Star® rating tools.*
